

Background Information

Voice Of Customer:
Focus on improving customer experience at HP/Poly through customer driven insights.

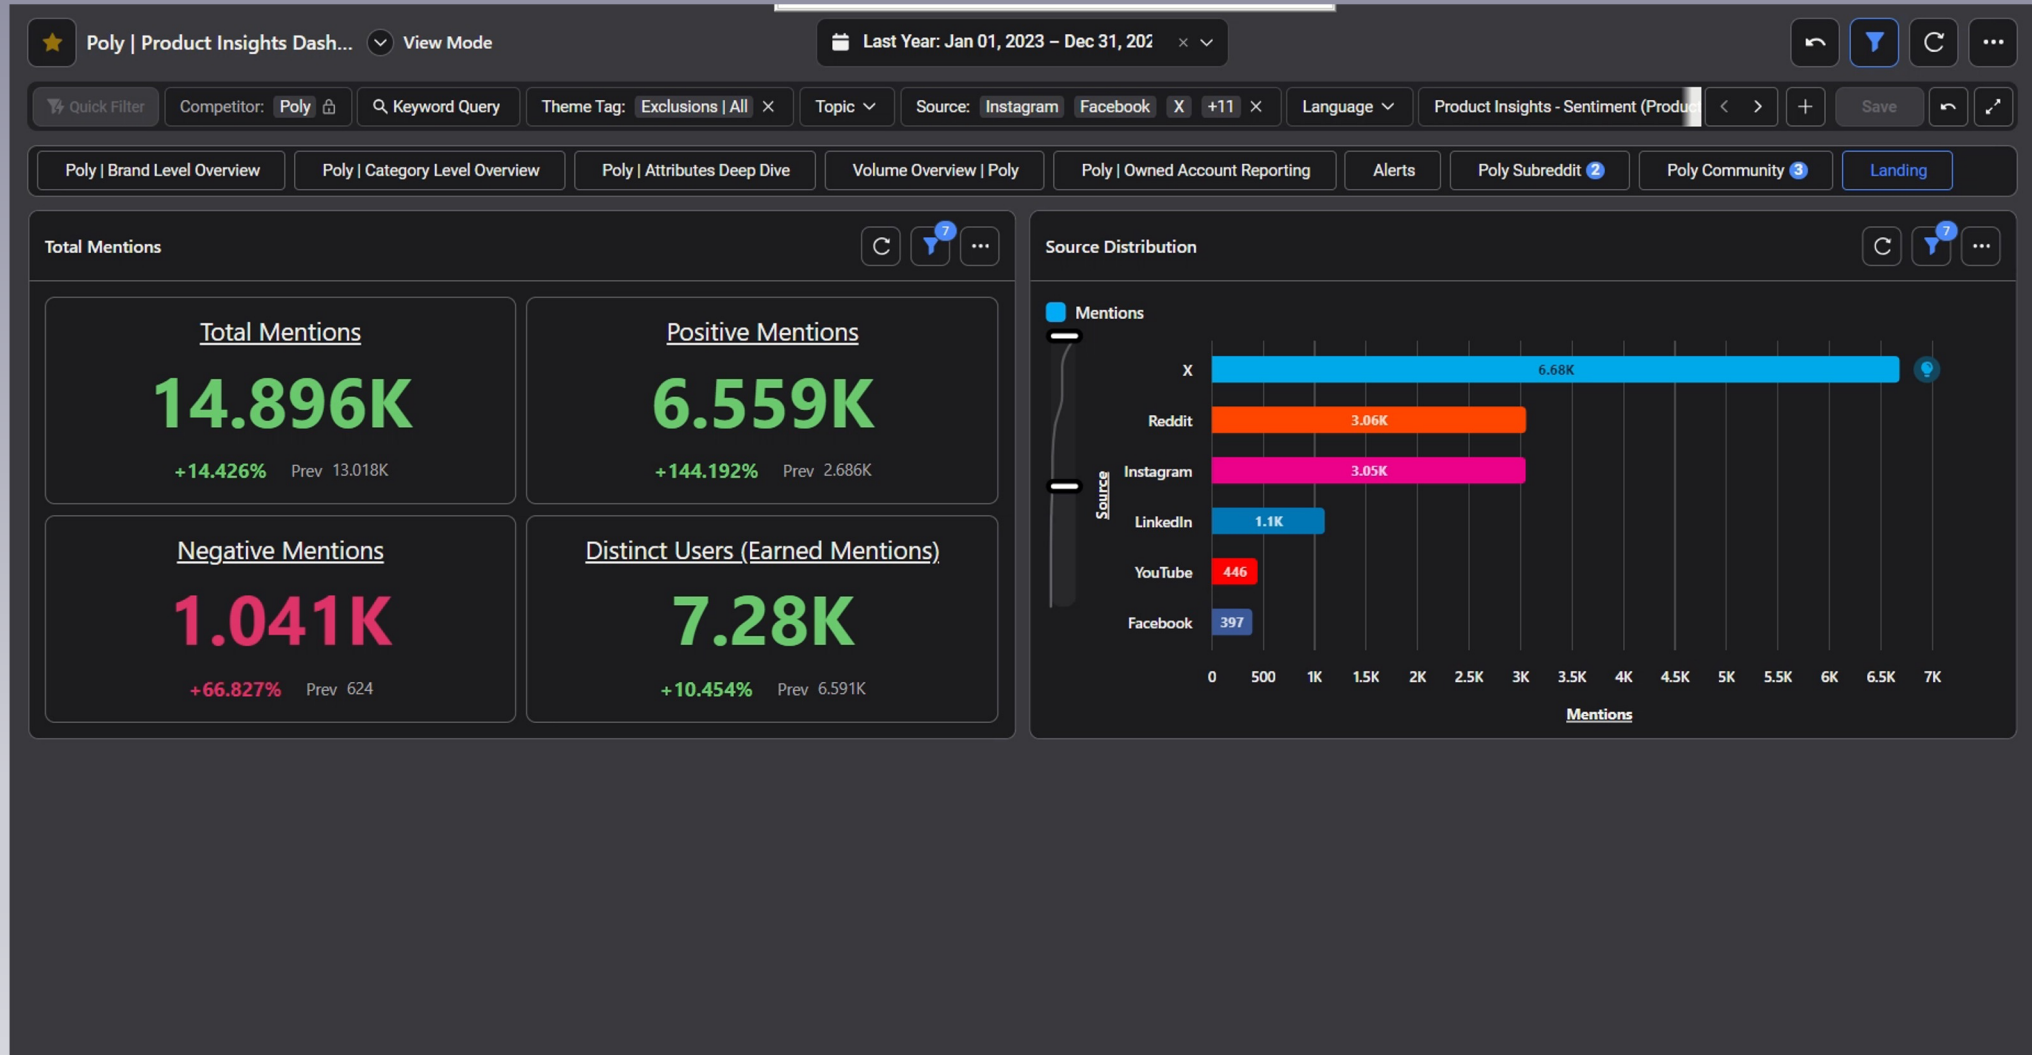

Sprinklr Integration
Utilize Sprinklr as an online social listening platform. However, there are missing products, inaccurate listening, and wrongly categorized sentiment.

Stakeholders and Beyond:
Provide insights and stories to relevant stakeholders to drive change within organization.

How we started in Sprinklr:

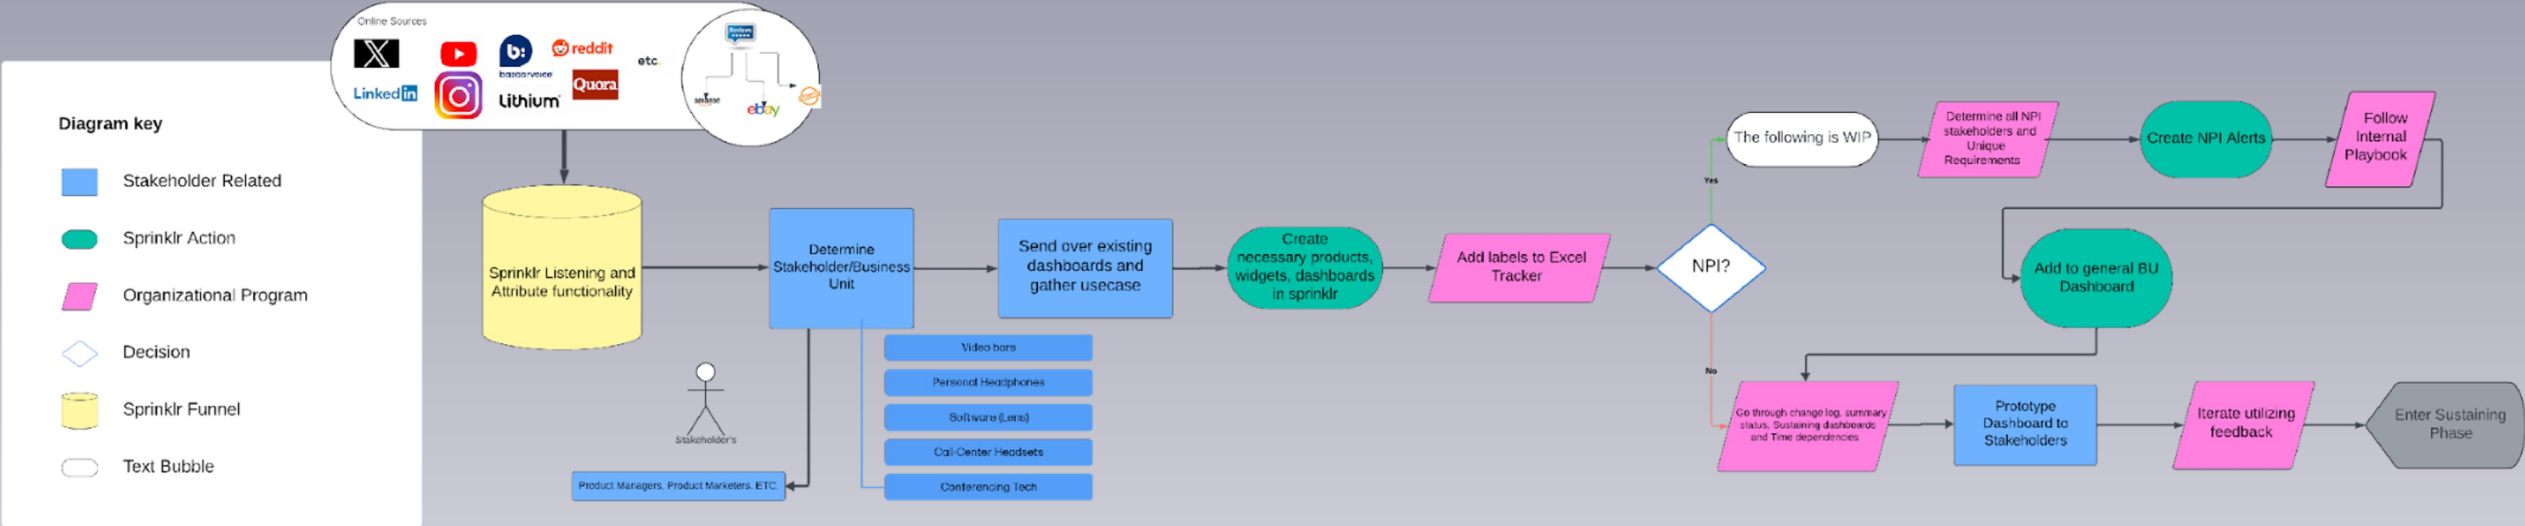

Overview

Pushing the narrative further to Poly and Beyond (S.M.A.R.T.)

Specific	Measurable	Attainable	Relevant	Time-Bound
- Assist in building out the SMM program plan. - Improve Sprinklr listening and to enhance the accuracy of sentiment analysis through Deloitte and Chatbot project (Deliverable). - Provide comprehensive competitive analysis (Deliverable).	- The number of total Poly Product mentions should fall, and the value sentiment ratio should change in any direction. - Iterate on competitor dashboard based on feedback from 3 stakeholders NPI, PMK PM. - Identify all 5 Poly Business Units and create value proposition for them in Sprinklr.	- Create internal documents and begin outlining SMM program. - Provide listening report to Sprinklr to improve sentiment categorization and language detection. - Focus on one poly product for competitive data for SMM.	- Program will provide actionable insights to stakeholders but may not be finished in time. - Compare and contrast sentiment report with fellow ML intern Daniel Yang on Adjacent Project. - Test limitations within competitor products and the realm of the possibility with products that aren't our own.	- Complete the dashboard and present it to stakeholders within the next quarter. - Start improvements in sentiment categorization and language detection within three months. - Create time dependencies for Sprinklr products, dashboard creation, and reporting.

Resource & Documentation

Organization outside of Sprinklr

Yang Project Plan & Creation Log

- Sprinklr Chatbot Project plan for the next few weeks post resources.
- Creation log for raw widget stream for replication in the future outside Sprinklr.

- **Objective:** Create a data analysis model with Sprinklr data lake (Post release data) to extract valuable insights about Poly product, Poly brand, industry, competitors or specific market trends.

Phase 1: Database creation and integration to frontend applications
Phase 2: Competitor Analysis and Chatbot AI Model Development

Previous and Next Weeks
Post Week 3 Goals and Achievements (Monday to Friday)

- 1. Data Collection and Integration**
 - **Objective:** Complete integration of data from Sprinklr sources and other platforms into the local MySQL database.
 - **Tasks:**
 - Finalize setup for automated data ingestion from all 10 sources
 - Implement scripts for data extraction and cleansing.
 - Test and validate data integrity and consistency within the database.
 - **Deliverables:** Fully populated MySQL database with structured data from all targeted platforms.
- 2. Backend Development**
 - **Objective:** Establish a robust backend infrastructure to support data retrieval and processing.
 - **Tasks:**
 - Set up Flask server for handling API requests and connecting with the MySQL database.
 - Implement API endpoints for data retrieval and ensure secure connections.
 - **Deliverables:** Functional backend server capable of serving data to the frontend application.
- 3. Frontend Application Development**
 - **Objective:** Begin development of the frontend application for user interaction.
 - **Tasks:**
 - Continue building the React application interface.
 - Implement basic UI features for data display and interaction.

Master Document and Tutorial's

- Master Document of everyone and everything needed for 3-month Sprinklr journey.
- Tutorials on Sprinklr if anyone with a Sprinklr license wants to replicate BU dashboards.

Listening Issue Report:

Model is overfitting, with irrelevant topics with similar keywords. (Ex: **Samsung 三星 galaxy M12 (Chinese/Korean), Poly guns (Russian), Poly Trio (Japanese)**). This is Especially apparent with different languages including the word Poly. Underfitting with Poly Lens and Apple, google [playstore](#).

Reddit

Poly Guns Time (1 year):

Brand	Count
Galaxy S21	120
Galaxy S20	110
Galaxy S20 FE	100
Galaxy S20 Ultra	100
Galaxy S20 5G	100
Galaxy S20 5G	100
Galaxy S20 5G	100
Galaxy S20 5G	100
Galaxy S20 5G	100
Galaxy S20 5G	100

According to [sprinklr](#) smart clustering we see over listening with the model with the Russian word "Poly." In fact a possible reason why we see this is due to the fact that the model numbers of guns like the **Zastava M70**, are confused with the Poly product because Poly or the translation is in Russian.

Show Conversation stream (Smart Insight Trends Specific).

Important The Mentions Distribution is abnormal skewed right to early June 2023 to September. This is mostly from different spam accounts during these two months.

Internal Excel Dashboard Tracker

Internal tracker purpose:

- Stakeholder Management
- Change log
- Sustaining
- Time dependencies

	A	B	C	D	E
	Name	Focus	Stakeholders	Phase	Priority
1					
2	Example Poly Dashboard	Template Based	Entire Poly Family	Incomplete	Low
3	[Prototype] Voyager Product Insight	Template Based	Voyager Stakeholders	Work In Progress	High
4	Daniel's Voyager Product Insights	Other	Julie G, Sabrina F, Daniel Y, Srid	Work In Progress	Medium
5	[Customer Journey] Voyager Produ	Newsletter/Reporting	Kristi M, Alec T, Richard K,	Work In Progress	High
6	F60 Competitor Products	NPI Dashboard	Julie G, Sabrina F, Daniel Y, Srid	Work In Progress	High

Phase 1 & 2 Execution

Dashboard Setup
and Refinement

Phase 1
Sentiment

Phase 2
Competitor

Issues to Track

Sentiment Analysis

Overfitting / Underfitting of the Model:

- Model struggles to detect spam or may misdetect (e.g., mentions like Samsung 三星galaxy, Poly guns). We don't know how marking changes this.
- Overemphasizing sentiment (positive, neutral, and sometimes negative) due to these issues.

Complexity of Filtering:

- Filtering could potentially solve some issues, but the extent and effectiveness need measurement.
- Filters can massively change the scope from smm to community based forum only
- Most of the time will eliminate overfitting, but susceptible to underfitting

Level Properties

- Issues with organization and segmentation especially with CO print competitive insights
- Segmentation and competitor filters are different, but to what extent

Product Properties

Dashboard Customization:

- Each user creates a unique dashboard based on their preferences and needs.
- Top problems are identified and integrated into the New Product Introduction (NPI) tool.

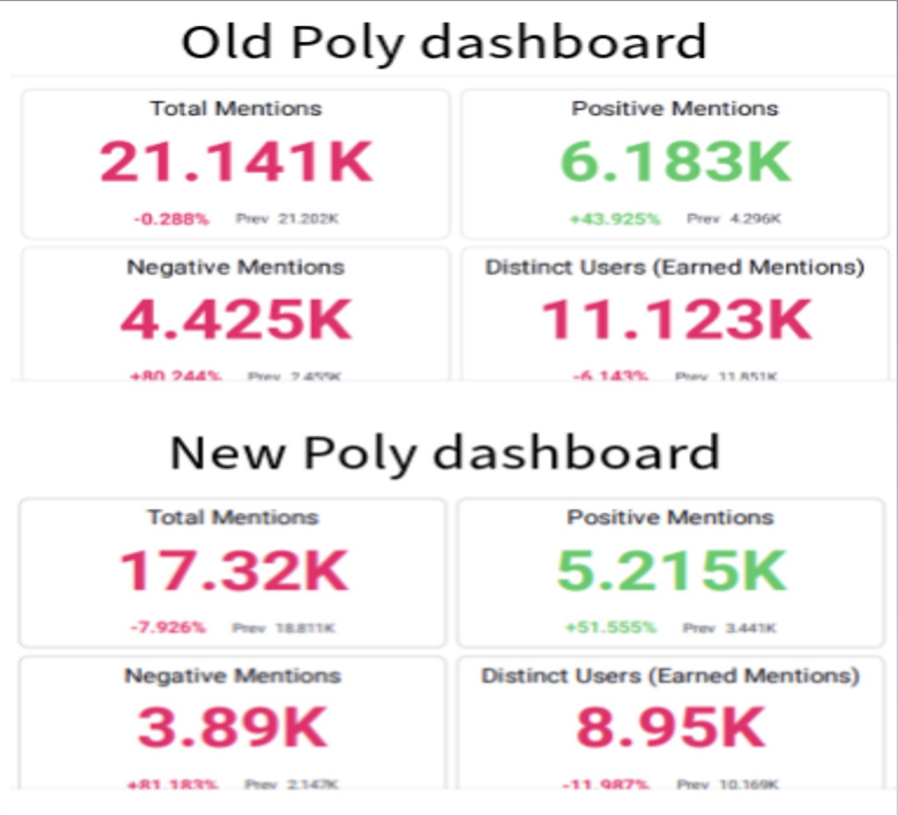

Manual Dashboard Creation:

- Dashboards are manually created, possibly involving input from Excel spreadsheets.
- Sentiment analysis requires manual selection.
- How to share dashboard reation with Blitz?

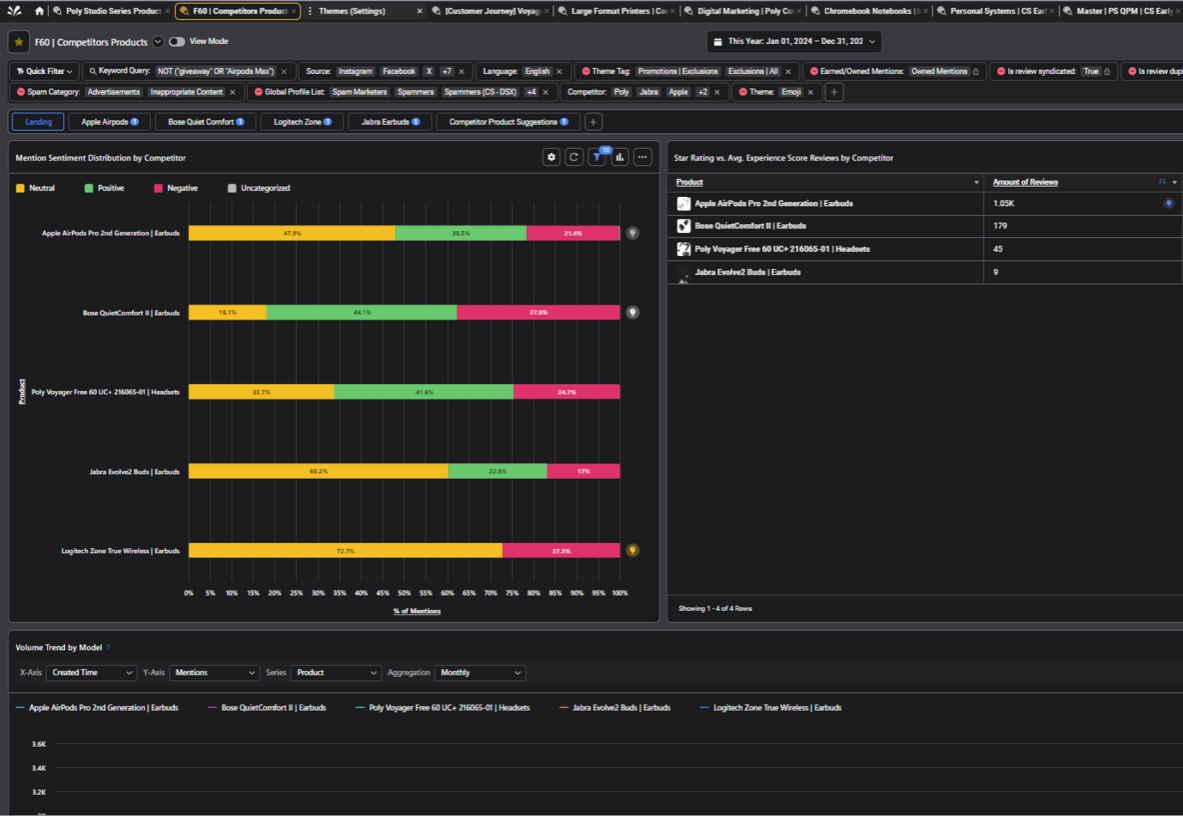

Query Monitoring:

- Social media search involves specific parameters such as product names and associated keywords.
- Not all of these apply as the OR feature is indirectly captured instead of AND.
- Direct messages and flagging from call centers and support are avenues for addressing issues and improving support.

Deliverables

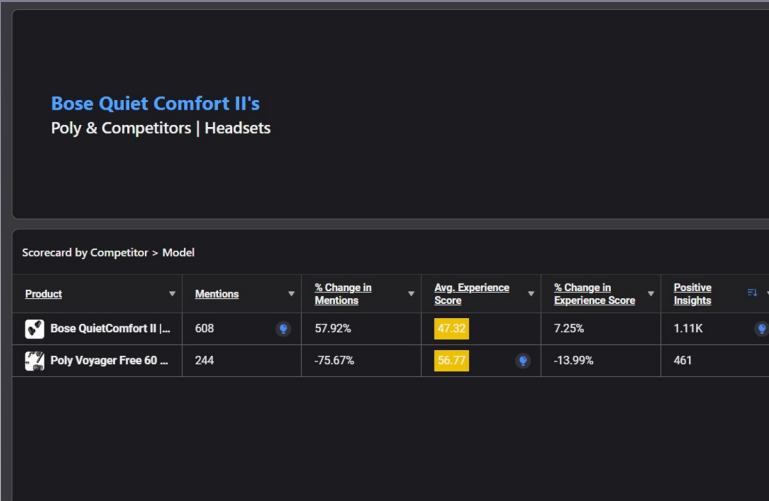

Sentiment/Listening: Post sending a Poly Listening Insight Report.

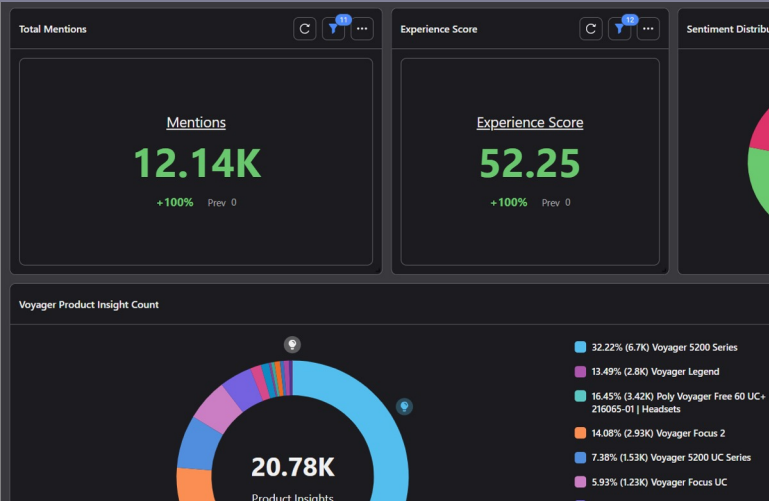

Competitor: Inputted Benchmarking for Voyager Free 60 for four products
